France	<p>In France, there are 3 control and official classification levels of infectious and contagious diseases surveillance:</p> <ul style="list-style-type: none"> - the MLRC (maladies réputées légalement contagieuses : officially and legally recognized infectious diseases). Prevention, survey and survey are under control of Ministry of Agriculture and Fishery (MAF) with the assistance of sanitary veterinarians (officially mandated). - The MDO (maladies à déclaration obligatoire) : occurrences of these diseases must be reported to the MAF, but sanitary police are conducted by equine industry. - The others diseases are only diagnosed and controlled by equine industry and practitioners. <p>For the two first categories, the MAF could be helped by national reference laboratories and agreed laboratories with official agreements for diagnosis. (in attached files MLRC and MDO list)</p> <p>Practitioners and equine industry and professional association have also created the RESPE (réseau d'épidémiosurveillance en pathologie équine or French network for epidemiosurveillance of equine diseases</p>	www.agriculture.gouv.fr www.respe.net
