

Panel discussion Trichinella and Toxoplasma

Possible control options for Trichinella

- Reduce testing the category of indoor pigs from controlled housing farms
- Continue testing of boars and sows from controlled housing farms for verification
- Continue testing of a random sample of indoor pigs from controlled housing farms for verification

Possible controls for Toxoplasma

- Test risk pigs from non controlled housing farms and freeze positive carcasses
- But no validated test is available
- Freeze risk carcasses from non controlled housing conditions
- Continue current education until more is known about detection and control
